AUDITORIA

Auditoria® Vendor Invoice Data Extraction

GAIN VISIBILITY • REDUCE MANUAL WORK • PROCESS VOLUMES QUICKLY

Auditoria's Vendor Invoice Data Extraction SmartFlow Skill increases speed, accuracy, and efficiency in the finance back office using AI-enabled SmartBots to automate redundant and manual data extraction from vendor invoices. Data gathered from interactions is captured in reports that allow analysis and insights to derive greater visibility into cash position.

WHAT'S SO "SMART" ABOUT AUDITORIA?

Auditoria SmartFlow Skills are discrete, pre-packaged, purpose-built accounting applications that automatically perform a wide range of critical finance back-office functions. Auditoria SmartBots act as "junior accountants" that execute the SmartVendor SmartFlow Skills, engaging with systems of record, shared inboxes, and key stakeholders. SmartBots capture data and actions and hand-off to humans using workflows to escalate when intervention is needed. Purpose-built for finance, Auditoria SmartBots integrate with the SmartVendor SmartFlow Skills to offer full-featured data invoice extraction and record creation.

AUDITORIA® VENDOR INVOICE DATA EXTRACTION SMARTFLOW SKILL | P2P

SmartBot extracts the invoice data in real-time for maximum visibility into true accounts payable balances and expected spend levels at any time.

Invoices from existing vendors are parsed, and a **vendor invoice record is created** so that AP personnel process greater volumes of invoices more accurately.

Refocus AP efforts to review extracted invoice data exceptions and pay invoices on time to **keep more cash on hand and avoid late fees.**

"Artificial intelligence (AI), smart workflows, and analytics unlock new levels of automation to drive efficiencies and savings."

— Micky Keck, Director Analyst - Gartner

HOW IT WORKS

DOCUMENT AND DATA FETCHING

- With advanced cognitive OCR and Computer Vision, SmartBots extract information from structured and unstructured PDF invoices to streamline data extraction and input activities.

- Approval workflows ensure data written to the system of record is checked and approved before being uploaded to verify and improve accuracy.

CONFIDENCE INDICATION DRIVERS

- An embedded confidence-driven mechanism bucketizes the extraction output into high, medium, or low confidence scores. Over time, the machine learns user input, and the buckets shift to more high confidence iterations and fewer low confidence iterations.

- SmartBots proactively ask for human help when the indication is low confidence. SmartBots flag for review when the confidence is medium, and high confidence extractions execute straight-through processing.

PRIORITIZED WORKLIST

- Streamline vendor invoice extraction and review with a daily worklist of strategic recommendations and prioritized actions.

- Curated by SmartBots, the worklist is dynamically updated to maximize efforts and outreach to optimize response times, escalate issues, and provide optimal vendor service.

HOW WE HELP

RAPID TIME TO VALUE

See value in days, not weeks or months, using automation with minimal IT dependence, thanks to pre-built integrations with leading ERP, collaboration, and email systems.

IMPROVED COMPLIANCE AND GOVERNANCE

Deliver accurate, complete, and timely financial reporting to shareholders, investors, and auditors by ensuring that data is always audit-ready.

SECURITY AND PEACE OF MIND

Remove the stress and friction in the finance function with a secure and reliable system of unparalleled financial precision that captures an audit trail of activities in the system.

SPEED AND VELOCITY

Give finance teams the ability to move at lightning speed, accomplishing more than ever thought possible, faster than ever imagined.
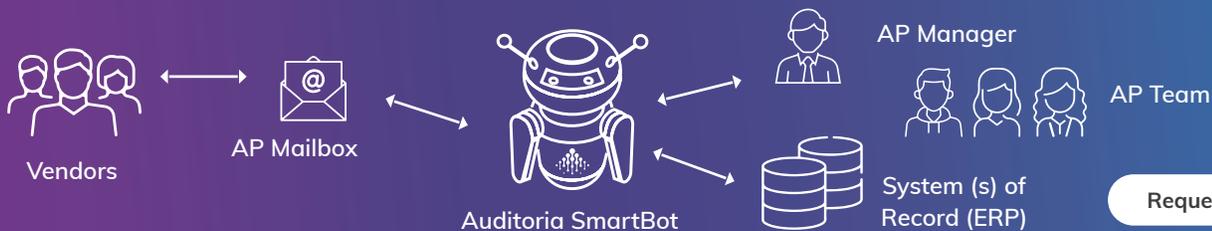

ERROR-FREE TASK EXECUTION

Remove human-introduced errors from the equation to ensure that transactions reconcile across systems of record.

PURPOSE-BUILT FOR THE FINANCE FUNCTION

Crafted with advanced AI technology, Auditoria's solutions were explicitly built for the finance function, with machine learning and natural language processing capabilities that understand finance vocabulary and context for the richest, most reliable AI-enabled finance workflows.

Auditoria's SmartBots provide a system of engagement, utilizing the AP inbox and systems of record to automate AP functions to improve cash performance.

Vendors → AP Mailbox → Auditoria SmartBot → AP Manager / AP Team / System (s) of Record (ERP)
